Education

Modern Education Society's Wadia College of Engineering, Pune Bachelor of Engineering (BE) in Computer Engineering	2022 - 2026
Dhole Patil Junior College Of Arts, Commerce & Science, Pune HSC (Class XII)	2021 - 2022
Rosary School Viman nagar, Pune SSC (Class X)	2019 - 2020

Projects

Location-Based Meetup Platform

- Built a real-time meetup platform using React and Express with JWT authentication and OTP verification.
- Implemented geospatial search using PostgreSQL PostGIS with ST_DWithin and radius-based filtering.
- Designed RESTful APIs using Node.js and Express.js with a clean and organized backend structure.
- Developed an interactive Mapbox GL JS frontend with dynamic markers and reverse geocoding integration.
- Implemented plan creation, participant tracking, and role-based validation with secure backend logic.

Cloud Storage Web Application

- Built a cloud storage system with user authentication, folder hierarchy, and file management.
- Implemented secure file uploads and downloads using MinIO object storage with time-limited signed URLs.
- Designed RESTful APIs using Node.js and Express with JWT-based authentication and access control.
- Developed a responsive React frontend supporting file preview, starring, folder navigation, and uploads.
- Implemented public file sharing via secure token-based links without exposing storage objects.
- Used PostgreSQL to manage users, files, folders, metadata, and sharing information efficiently.

Role-Based RAG Chatbot System

- Built a role-based RAG chatbot using FastAPI and React for secure querying of organizational documents.
- Implemented document ingestion pipelines for Markdown files with chunking and embedding generation.
- Designed a semantic retrieval layer using Chroma vector database with role-based metadata filtering.
- Integrated Groq LLaMA to generate grounded, context-aware answers with source references.
- Implemented JWT-based authentication with bcrypt password hashing for user management.

Technical Skills

Programming Languages: Python, C++, JavaScript, SQL

Frontend Stack: HTML, CSS, TailwindCSS, React.js

Backend Stack: Node.js, Express.js, REST APIs, OAuth, JWT

Databases: MySQL, PostgreSQL

ML: Numpy, Pandas, Scikit-learn, Keras, TensorFlow

Tools & Workflow: Git, GitHub, Docker, Postman
